

Hello everyone!

We would like to inform you that an meeting named

**"Probing Active Galactic Nuclei with Radio Techniques"**

will be held during [May 21-25, 2015 in Yining, Xinjiang Province, China.](#)

The purpose of this meeting is to gather researchers to exchange new results and views, especially with expertise in utilizing radio techniques to probe AGNs. This is both an opportunity for mainland Chinese astronomers to get to know each other and form collaborations, and for them to interact with foreign experts, especially from neighboring countries/region such as Japan, Taiwan, South Korea, and India, all of whom have a substantial community of radio astronomers whose research focuses on AGNs.

**SOC Members**

BAI Jinming	Yunnan Observatory
CAO Xinwu	Xiamen University
FAN Junhui	Guangzhou University
Luis C. HO	KIAA-Peking University; co-chair
LIU Xiang	Xinjiang Astronomical Observatory; co-chair
NAN Rendong	National Astronomical Observatory of China
SHI Shengcai	Purple Mountain Observatory; co-chair
SHEN Zhiqiang	Shanghai Astronomical Observatory
WANG Tinggui	University of Science and Technology in China
YUAN Feng	Shanghai Astronomical Observatory
YUAN Weimin	National Astronomical Observatory of China
ZHANG Shuangnan	Institute of High-Energy Physics

**Topics covered in the meeting include:**

1. Observations and theory of AGN jets on all scales
2. AGN jets and feedback
3. Polarization measurements and inferences of magnetic fields near AGNs
4. The interstellar medium content of AGN host galaxies, and scattering in our Galaxy
5. Binary supermassive black holes

Attachment is our meeting poster.
